Course Overview

Completion of *Assessing the Real Costs of Farm Machinery* will give primary producers the knowledge to be able to make sound decisions regarding farm machinery purchase and replacement.

The course enables primary producers to develop the skills to calculate the true costs of owning machinery and determine the best machinery options for their business in terms of sustainability, economy and natural resource retention.

Recommended For

This course is ideally suited to primary producers who are considering machinery purchase or replacement.

Benefits for You and Your Business

The course will allow the participant to think strategically about the real costs of owning and running machinery and provide them with the confidence to make decisions about the most suitable ownership model for their business.

Content

The course will enable participants to evaluate the real costs of owning machinery and compare this to alternative tenure options. Course participants will have the opportunity to evaluate their own farming businesses and scenarios using various tools and applications.

Learning Outcomes

At the end of this course, participants will have:

- An understanding and skills in developing a machinery policy for your business
- An understanding of the true cost of depreciation
- An understanding of what it is costing producers to run their machinery
- An understanding of the alternatives that exist in machinery ownership
- An understanding of the implications of either owning or contracting machinery
- An understanding of the true cost of replacing machinery
- An understanding of the financial impact of machinery purchase on a business
